 Arun45walker03@gmail.com
 +91 87789 54676
 Vellore, India.

Profile

Proficient in **C, C++, Java, JavaScript, Python, PHP, HTML5, CSS3, MySQL, Hibernate, Spring**, and **Data Structures & Algorithms**. Skilled in developing scalable web applications and solving complex problems efficiently. Currently expanding skill set in DevOps, AWS deployment, and cloud infrastructure. Planning to deepen expertise in Linux system administration and malware analysis as the next objective. Committed to continuous learning and applying best practices in software development and cybersecurity.

Education

10th SSLC	Kingston Matric HSC, KPD	86.80%
12th Higher Secondary	Cluny Matric HSC, Katpadi	71.33%
Bachelor's Degree	VIT University, Vellore	7.98 (CGPA)

Projects

1. Serverless To-Do List Application using Java Maven, Swing, and Email Integration:

A desktop-based application built using **Java Swing** for the user interface and **Maven** for dependency management. The application performs **CRUD operations (Create, Read, Update, Delete)** to manage tasks and integrates email functionality to send reminders, ensuring seamless task organization and notifications **without a backend server**.

2. "Vaultify" – A Secure Web Vault :

<http://www.vaultify.infinityfreeapp.com/>

A secure web-based vault for **managing and storing passwords online**. Features a user-friendly interface with secure login, sign-up, and dashboard. Users can save, modify, and retrieve passwords from a protected database. Includes **a three-factor authentication** system for password recovery: **reset link, OTP verification**, and **security questions**.

3. Customer Support Ticket Management System: A Spring Boot & Thymeleaf Web Application with Role-Based Access and Real-Time Analytics

I developed a comprehensive **Customer Support Ticket Management System** as an individual project, utilizing **Spring Boot 3.2.5, Java 17, and H2 Database** with **Spring Data JPA integration** for robust data persistence, alongside a responsive **HTML5/CSS3 front-end** with **Thymeleaf templating**. This full-stack application features dual-role access (User/Admin), enabling users to create, track, and manage support tickets with priority levels and categories, while admin mode provides comprehensive analytics, ticket lifecycle management, and user administration. The system implements **Spring Security with role-based authentication, RESTful APIs for seamless frontend-backend communication**, and offers real-time dashboard analytics with ticket resolution metrics, presenting it as a professional enterprise-grade web application.

3. Personal Portfolio Website:

Built a simple **portfolio website from scratch using HTML, CSS, and a bit of JavaScript** as my first **UI/UX practice project**. Implemented basic dynamic effects and a clean layout to practice web fundamentals. Designed it to experiment with responsive design and user-friendly navigation.

4. Routine Fitness App using Android Studio, Java, XML, and SQLite:

<https://apkpure.net/routine-fitness/com.example.fitness>

A fitness management app developed with **Android Studio using Gradle, Java, and XML**. The app allows users to set custom exercise tasks, view task history, and update their profile. Data is managed locally using **SQLite** for offline access. The app is uploaded and available for download on **APKPure.com** for Android devices.

5. IOT Project using Arduino Board "Sonar Motion Alert System" with Embedded C++.

With **Arduino UNO R3 Microcontroller** and with a **electrical bread board servo motors, sonar sensors, switches & buzzers** and connected with appropriate nodes and using software with embedded C++, hardware's were worked according to software instructions resulting **Motion sensor**

Future Objective

Looking to grow my skills in networking, cybersecurity, malware analysis, reverse engineering, and penetration testing. I'm excited to work on projects that make systems more secure and protect digital spaces.
