Skill

C / C++	■ ■ ■ ■ ■ □
Java	■ ■ ■ ■ ■ □
Web Dev	■ ■ ■ ■ ■ □
SQL	■ ■ ■ □ □ □
Python	■ ■ ■ ■ □ □

Projects

1. Vaultify – A Secure Web Vault [<http://www.vaultify.infinityfreeapp.com/>]

A secure web-based vault for managing and storing passwords online. Features a user-friendly interface with secure login, sign-up, and dashboard. Users can save, modify, and retrieve passwords from a protected database. Includes a three-factor authentication system for password recovery: reset link, OTP verification, and security questions.

2. To-Do List Application using Java Maven, Swing, and Email Integration

A desktop-based application built using Java Swing for the user interface and Maven for dependency management. The application performs CRUD operations (Create, Read, Update, Delete) to manage tasks and integrates email functionality to send reminders, ensuring seamless task organization and notifications without a backend server.

3. Routine Fitness App using Android Studio, Java, XML, and SQLite

A fitness management app developed with Android Studio using Gradle, Java, and XML. The app allows users to set custom exercise tasks, view task history, and update their profile. Data is managed locally using SQLite for offline access. The app is uploaded and available for download on APKPure.com for Android devices.
